DEMENTIA
is a set of progressive symptoms due to brain diseases which interfere with daily life activities.

Symptoms include memory loss, behaviour changes, judgement and reasoning problems, and changes in mood and communication abilities.

According to the World Health Organization, over 50 million people worldwide live with dementia. Approximately 135 million people in 2050, 8 million new cases each year.

400,000+
Canadians 65 and over live with dementia

“Dementia is one of the most urgent health challenges facing the world today and is not solvable by any one country, organization or individual alone.”
Dr. Yves Joanette, Scientific Director, CIHR Institute of Aging; Chair, World Dementia Council (2016-2018)

193 MILLION+
invested in dementia research

By 2031, the total annual health care costs for Canadians living with dementia will reach $16.6 billion – double the cost from two decades earlier

$16.6 BILLION

2011-2016

The risk of being diagnosed with dementia roughly doubles every 5 years after age 65

350+ Canadian researchers working in the areas of prevention, treatment and quality of life

Collective focus on making a positive impact on the quality of life and the quality of services for Canadians living with dementia and other neurodegenerative diseases

Supported by CIHR and 14 partners from the public and private sectors

TWO-THIRDS ARE WOMEN

Canadian Consortium on Neurodegeneration in Aging (CCNA)

JPND Joint Programming in Neurodegenerative Diseases (30 countries)
CoEN Centres of Excellence in Neurodegeneration (8 countries)
ADNI NIH Alzheimer’s Diseases Neuroimaging Initiatives

Many diseases can cause dementia - the most common cause is Alzheimer’s disease.
